

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

INTRODUCTION.

THE Art of Engraving on Wood, as practised in Europe, has been studied exhaustively in all its branches, but the xylography of China and Japan, which, by superior antiquity, and perhaps by direct parental relationship, is entitled to lead the way in any historical discussion of the subject, has until recently been little more for us than a dead letter. The aim of the present Exhibition is to show the degree of excellence achieved by our Oriental brethren in an art that must be regarded as their own, and at the same time to illustrate their success in the application of the allied processes of Stencil Printing and Engraving on Copper and Stone, which they have borrowed from ourselves.

It is well known that block printing was in use amongst the Chinese many centuries before its adoption in Europe, and as the same mechanical processes suffice for pictorial engraving, it might be inferred, and correctly, that in this respect also we have been in the rear of the Middle Kingdom. Not only was it so, but other Turanian nations, such as the Koreans and Japanese, have been able to take advantage of the labours of their neighbours to anticipate us in the possession of an agency that in our hands has led the way to mighty strides of education.

The historical facts concerning Chinese, Korean, and Japanese printing have already been set before us by Mr. Ernest Satow in the Transactions of the Asiatic Society of Japan (vol. x.), and more recently by Prof. Douglas in his "Guide to the Chinese and Japanese Typographical and Illustrated Books" now on view in the King's Library. Referring to these for a mass of curious information, it will be sufficient here to say that block printing was invented in China not later than the 6th century of our era, thence

passing into Korea and Japan; and in three copies of a Buddhist Dharāni printed in the latter country before the end of the 8th century, and brought to England by Mr. Satow, we have been placed in possession of what appear to be the oldest specimens in existence of the art of Gutenberg and Caxton. The examples of Korean printing are less ancient, but it may be taken for granted that the Koreans learned the process before the Japanese, and it is probable that they were the intermediaries through whom it passed into Japan.

The history of pictorial engraving is more conjectural in its details. It is obvious that the men who cut on wood the complex ideographs of the Chinese would be able, when called upon, to engrave the outlines of a drawing, and as pictorial art was at its highest point during the early ages of printing, it can scarcely be doubted that the wood block was employed for both purposes concurrently. We have, however, no absolute proof of this. The oldest Chinese pictorial engraving extant is perhaps that now exhibited (No. 427), which bears the date of 1331; and although there are many Japanese wood cuts of similar character to which a more ancient period is assigned, there are but few whose pretensions will bear scrutiny.¹ The impression now shown (No. 1), from a rough willow block preserved at a temple in Shibamata, as the handiwork of the famous Buddhist Abbot Nichiren (d. 1282), and the two representations (Nos. 2 and 3) of Dēva Kings by a priest named Riōkin, which are dated in 1325, may be accepted as authentic, and others named by Mr. Satow in the article referred to go back even as far as the beginning of the 11th century. The examples before us, however, are sufficient to demonstrate that both Japan and China were in advance of Europe in pictorial xylography, as well as in block and type printing.

Our information upon the story of wood engraving in CHINA is lamentably scanty. It is possible that in the days when the Chinese led the world as painters, they produced specimens of xylography worthy of their artistic renown, but none of these have reached us. The illustrations of the Buddhist text known as the Kwanyin Sutra (No. 427 and Fig. 1) show a practised hand,

¹ An impression from a wood block representing Daikoku (the Japanese form of Mahākala), in the British Museum Collection, is attributed to the great promulgator of Buddhism, Kōbō Daishi, (774-834 A.D.). There can, however, be little doubt that it is of comparatively modern date.

but are mechanical and uninteresting in style, and the later examples are generally inferior to these, and never of a much higher character. The wood cuts of which the Chinese are said to be most proud are those illustrating two

volumes descriptive of the cultivation of rice and the manufacture of silk, of which we are only able to exhibit a photographic reproduction and a Japanese facsimile (Nos. 422 and 432). These show much delicacy of handling, but in no respect deserve comparison with the better class of Japanese work. Chinese

xylography is often careful, occasionally elaborate, but never of any great power; while in some books of wide reputation as art manuals, such as Nos. 417 and 430, the engraver has done little more than caricature the art of his period.

It is believed that the Chinese discovered the method of obtaining polychromatic pictures by means of a series of wood blocks, long before the date of the Psalter of Faust and Schoeffer (*circa* 1450), but again material evidence is wanting. The earliest specimen known is the *Kaishiyen gwa den* (No. 430), a copy of which is in the British Museum; a later but far better example is the beautiful work now exhibited by Mr. Alexander (Nos. 425-6), the *Ling mao hwa-hwui* (1704), which was copied in 1748 by a Japanese engraver (No. 424); but even this has been surpassed, both artistically and technically, by the Yedo and Kioto chromo-xylographers of the last century. There is little doubt that the scarcity of well-engraved book illustrations in China is in great part accountable for the inferiority of the more modern decorative art of the Middle Kingdom to that of Japan. While the spirited designs of Moronobu, Morikuni, Kōrin, Hokusai, and a score other Japanese artists were multiplied with marvellous accuracy and feeling by the wood engravers, chiefly for the use of artisans, the Chinese porcelain decorator or lacquer painter had to content himself with book models like the *Kaishiyen gwa den* and the *Dzu-ye So-i* (Nos. 430 and 417), and repeated the stiff ungraceful outlines with only too severe fidelity of imitation. Painters of consummate skill have not been wanting in either country, but it has been left for the Japanese, and chiefly through the medium of the wood engraver, to bring pictorial art within the reach of the million.

There is still less to say with reference to KOREAN xylography. It has been mentioned that block printing was probably employed in Korea before its adoption in Japan, and we are told by Mr. Satow that the Koreans are known to have used moveable type as early as 1317, but there could scarcely be a worse specimen of book illustration than the only example of Korean pictorial engraving we are able to bring forward, No. 428, a large and somewhat pretentious volume printed in the early part of the 17th century. A Japanese reproduction of an older work (1651 A.D.), preserved in the British

Museum, is comparatively skilful, but has no claim to excellence. Modern examples there appear to be none, for Korea, at its zenith when Japan was beginning to emerge from barbarity and when Europe had sunk to its lowest intellectual level, has now reached its nadir, and is an anachronism by the side of the Suzerain Empire and the younger country into which it once poured countless treasures of art and learning.

It has been explained that JAPAN is indebted for her knowledge of the processes of wood engraving to her great continental neighbour; but while there are few Chinese specimens that have any special artistic value, the collector of Japanese 'single sheet' woodcuts and illustrated books may enrich himself with a host of works that exemplify almost every good quality within the range of xylographic art, and at the same time present a picture of country and people, of customs and traditions, such as no written record can ever supply. The study of the vast quantity of material of this kind now accessible in the collections in our own country, and in the choice libraries of Messrs. Goussier, Burty, and Duret, in Paris, would be the work of a lifetime, and the brief sketch of its development and characters here submitted must be regarded only as a provisional summary of the leading facts as yet within our reach.

The date of the first essays of the Japanese in wood engraving can only be conjectured, but we may assume that the art was occasionally practised from the time of the introduction of block printing—*i.e.* not later than A.D. 770, and at least a century before the great painter Kōsō no Kanaoka executed his masterpieces. There are still preserved in the temples of Japan a number of pictorial blocks attributed to the early native fathers of the Buddhist religion, from the seventh century onwards, and, although most of these engravings are obvious frauds, the evidence in the case of a few is unassailable. It is at any rate beyond doubt that for many centuries before the date of the first book illustrated with wood cuts, xylography in its two chief applications was carried on within the precincts of Buddhist temples for the purpose of reproducing texts (sutras) and pious images. In this period there was probably no distinction between engravers of characters and engravers of pictures, as special skill was scarcely necessary for the reproduction of the

conventional drawings required to illustrate a religious essay, and the few examples that have been handed down to us, with the exception perhaps of the rather late series by Riōkin (Nos. 2 and 3), show little merit. The actual service to Art rendered by the early engravers was very small, and we must regard the first historical period, terminating with the opening of the 17th century, chiefly as one of archæological interest.

The *second period* begins with the introduction of woodcut illustrations into popular books, and this important step may have been nearly coincident with the first application of printing for the spread of secular literature. The oldest illustrated book at present known to us is a copy of a romance of the 10th century, called the *Isé Monogatari* (No. 251, and Fig. 4), published in 1608 and again in 1610, but it is most probable that the claims of this volume to priority will one day be superseded, for it has scarcely the appearance of a maiden effort. It was followed by other books of the same character, and in some of these the pictures have been defaced by a coarse hand colouring that strongly recalls the garish decoration of the cuts in the English Chap-books of the early part of the present century. The *Hōgen Monogatari*, an historical romance issued in 1626 (No. 252), is a good example of the type. Books of this kind multiplied. The classical compositions of the order of the *Isé Monogatari* shared the public favour with treasuries of moral anecdotes like the *Jōkiō hidan*, a mirror for the instruction of the gentler sex, published in 1649 (No. 253), and many works of fiction of a less heavy class. There was, however, no trace of artistic advance, and the 17th century was drawing to a close before the Japanese engraver had produced anything worthy of the age or of the people. The period was nevertheless one of note, for the artist now became fully recognised as an important auxiliary to the author, and the improvement of his work was but a question of time.

The hint of book illustration was undoubtedly given by the manuscript rolls of which the earlier libraries were mainly constituted. These were gorgeously embellished by artists of the highest eminence, and reproduced in considerable numbers by elaborate hand copies; and it is noteworthy that the designs in the *Isé Monogatari* and *Hōgen Monogatari* were in close imitation of the style of the old painters of the Yamato school.

FIG. 4. The Poet and the Peerless Mountain. Facsimile of an engraving in the

Of the draughtsmen and engravers who were responsible for the book cuts we have no record.

The *third period*, short but all important, began about 1680, and the honour of its inauguration falls upon a dyer's draughtsman, afterwards a noted painter, named Hishigawa Moronobu, who may also be regarded as the true founder of the School which has, in modern times, given us such men as Hokusai, Settan, and Hiroshigé, and nearly the whole of the illustrations to the literature of the last hundred years. Moronobu was a painter of high capacity, and could have made for himself a name in any department of pictorial art, but it is as a book illustrator we owe him the greatest share of our debt of gratitude. With him begins the history of artistic engraving in Japan. He supplied pictures for books of almost every description, in fact went over nearly all the ground since occupied by Hokusai and his school, and the reproduction of the vigorous but simple outlines of

his masterly sketches was in itself an education for the wood engravers, who perhaps were directly superintended by the artist. The names of the engravers are not known, but the technical excellence of some of the cuts in the now rare volumes that issued from his hand can scarcely be surpassed (see No. 254). It is to be regretted that Moronobu did not avail himself of the process of chromo-xylography, which was introduced while he was yet at work, for he was a consummate colourist. Some of the copies of his books however were painted by hand in a very attractive manner (see No. 255), and apparently for purposes of sale. He died at the age of 67 between 1711 and 1716.

The names of his associates and pupils are variously given by different authorities. The latest enumeration, that of Kiōsai in his '*Gwa den*' (1887), mentions a brother named Morofusa, a nephew named Moronaga, and others; but as no book known to have been illustrated by any of these artists has yet been met with, it is probable that they devoted their efforts to painting; or it is possible that the unsigned engravings in some of the volumes of the end of the 17th and beginning of the 18th century, such as *Kwaraku saiken dsu* (No. 454), were the work of one or other of their number. His best-known contemporary, however, as a book illustrator and designer of 'single sheet' pictures (*ichimai-yé*), was Okumura Masanobu, whose style resembled rather that of Miyagawa Chōshun, a rival of Moronobu in the revived popular school of painting, and like Chōshun he was chiefly noted for his delineations of women. Two of his volumes are shown in case H (Nos. 260 and 261), and two of his single sheet compositions in Nos. 5 and 7. Other independent book draughtsmen of the same period were Haségawa Tōūn, whose *É-hon Hōkan* (1688) was apparently the model for the many collections of popular legends which followed; and Ishikawa Riusei, the artist of the *Yamato kōsaku yé-sho* (1685), in which will be found many interesting sketches of Japanese customs. See Nos. 257 and 262.

The end of the seventeenth century also brought into the field another popular artist of great capacity in Torii Kiyonobu, the founder of the theatrical school of popular art, and the first important promulgator of chromo-xylography. He also supplied illustrations for many of the early novelettes, and is reported as the inventor of the style of scene painting still in vogue in

FIG. 6. The Three *Saké* Tasters. Burlesque of an ancient picture typifying the three great Creeds—Buddhism, Taoism, and Confucianism. Reduced facsimile of an engraving after Okumura Masanobu (about 1700). No. 261.

the Japanese theatres. His works are rare, but the colour print No. 6 and the novelette No. 532 will serve as examples. His manner was preserved by his school, which continued down to about 1780, to give place to the allied school of the Katsugawas.

In the early days of wood engraving a single block only was employed, but as soon as the Chinese method of chromo-xylography, by the use of a series of wood blocks, became understood in Japan, it was adopted with an energy and intelligence that soon left its inventors far in the rear. The date of the process in China is uncertain, but colour printing is known to have been carried on extensively in the 17th century, and, as shown by the rare volume already referred to, the *Ling Mao Hwa-hwui*, published in 1701, had reached a high degree of merit while the Japanese imitation was still in its infancy.

The origin of the art in Japan is assigned by most native authorities to the end of the 17th century, when one Idzumiya Gonshirō is said to have made use of a second block to stamp certain parts of his engraving with *béni*- or extract of carthamus (hence the name *béni-yé* applied to the early colour prints), but the late Mr. Ninagawa believed the earliest known example of printing in colours to be a portrait of the actor Ichikawa Danjiuro (the histrionic ancestor of the present leader of the Tokyo stage), sold in Yedo in 1695.¹ It appears at any rate to have been amongst the earliest of the 'single sheet' pictures known as *Yédo-yé*, which afterwards became a commodity of much artistic and commercial importance.

The history of artistic chromo-xylography, as demonstrated by existing specimens, began about 1700, when 'single sheet' engravings (*ichimai-yé*), printed from three blocks, in black, pale green or blue, and pale pink, were executed after the designs of Torii Kiyonobu, and a little later after those of his pupil Kiyomasu, and of Okumura Masanobu. About 1720 a fourth block was added by Nishimura Shigénaga, and the number was increased to five or six about forty years later; the colours gaining in purity with each successive generation of artists, until the art was brought to perfection.

¹ This date is of course considerably posterior to that of the chiaroscuro engravings of Ugo da Carpi and Lucas Cranach, and of the still earlier colour prints of Peter Schoeffer. It is not certain, however, whether the process adopted by Schoeffer was similar to that employed in China and Japan.

between 1765 and 1785 in the 'single sheet' pictures of Torii Kiyonaga, Suzuki Harunobu, and Katsugawa Shunshō, and maintained for another twenty-five years under the Utagawas—Toyoharu, Toyohiro, and Toyokuni, and many others who will be named.

The popular school was also served importantly during the latter part of the seventeenth century by three painters who did not call in the aid of the engraver for the diffusion of their works. These were Honnami Kōrin (1660–1716), a great lacquer painter, and one of the boldest and most original decorative designers that Japan has ever possessed; Hanabusa Itchō (1651–1724), a remarkable inventive genius, with a dangerously keen sense of humour; and Miyagawa Chōshun, to whom allusion has already been made. The drawings of Kōrin were collected and published in the present century by his famous imitator, Hōitsu (see No. 308). Those of Itchō were reproduced under the direction of his followers in the course of the last century (see No. 274); but the memory of Chōshun, whose pictures are not less deserving of preservation, failed to receive the same honour. A few other artists might be added to this enumeration, but they exercised no perceptible influence upon the progress of the school or of xylography.

This period may be said to end about 1710, or rather to pass almost imperceptibly into another term signalized by the labours of a new set of artists and by a wide augmentation of motives. It had touched, however, upon all the more important branches of popular art. The illustration of novels and novelettes had been taken up by Moronobu and Kiyonobu. Portraits of actors, theatrical tableaux, and pictorial playbills were produced by the latter artist and his pupil Kiyomasu; the illustrations of local scenery, which were afterwards to develop into the important topographical handbooks of Shunchōsai and Settan, found their germ in the *Kwaraku saiken dzu* (No. 454), by a pupil of the Hishigawa school. Moronobu himself anticipated Ōoka Shunboku and Sakurai Shiūzan in the publication of copies of famous pictures: the *É-hon Hōkan* of Haségawa Tōin (No. 257) led the way for the innumerable volumes of illustrated legends: the *Tokiwa gi* (No. 479), published in 1700, was apparently the first of the painter's engraved collections of industrial designs: and, lastly, portraiture of beautiful women—the favourites of the tea-house and other resorts—attracted the pencil of Okumura Masanobu. There

remained, indeed, little to add, but it is nevertheless very easy to distinguish between the productions of this short term of three decades and those of the cycle which succeeded it.

The *fourth period*, extending from about 1710 to about 1765, is marked principally by the labours of two men, Tachibana Morikuni (1670-1748) and Nishigawa Sukénobu (1671-about 1760), and by a considerable development of chromo-xylography in the hands of the Torii school. Morikuni and Sukénobu, pupils of the Kano school—one of the most severely classical of the orthodox academies—and both prolific artists, worked in different directions in the cause of book illustration. The former is best known by his volumes of wood cuts, designed for the guidance of artisan artists, comprising drawings of birds, flowers, trees, landscapes, scenes of history and legend, in fact every kind of motive that could be utilized by industrial draughtsmen—who down to the present day have continued to profit by his legacy—and he has besides left some specimens of his more purely academical work, in the form of a masterly series of quick sketches in the style of his first academy (No. 269). Sukénobu, on the other hand, although a contributor to popular art education in his *E-hon Yamato hiji*, which consists principally of illustrated legends, won his reputation by his drawings of women, pretty little creatures with every charm that graceful and varied action, gently undulating contours, and clinging folds of cunningly-devised drapery, were able to confer, but soulless and simpering, and devoid of individuality as the figures of an European fashion plate. He was nevertheless a true artist, and the wood cuts in his more noted albums are amongst the most pleasing pictures of his century. He also illustrated novels and a host of books of other and various kinds (Nos. 265 and 534).

As a third but later and less influential artist of the same class, may be named Tsukioka Tangé (1717-1786), who is reputed for his drawings of heroic deeds. He left also a book illustrative of the scenery of Eastern Japan (see Nos. 275 and 458).

Another characteristic of the new period must also be accredited to a pupil of the Kano school of painting, Ōōka Shunboku (d. about 1760 at the age of 84), who edited the first three or four of an invaluable series of albums containing copies admirably drawn and engraved, after pictures by famous

Japanese and Chinese masters. The earliest of these was the *Gwashū kwai-yō*, published in 1707, which was followed by the *É-hon té-kagami* (1720), the *Gwa-ko sen-ran* (1740), and the *Gwa-yen* (1749), all still in use amongst artisan designers; and the series was continued by Sakurai Shiūzan in the *Gwa-yei* (1750), *Gwa-hō* (1764), and *Gwa-soku* (1777). Three examples out of this mine of wealth are shown in Nos. 268, 270, and 279.

There were few volumes devoted to scenery in this period. The *Tōgoku meissho-shi* of Tsukioka Tangé (No. 458) is perhaps the most noteworthy, but there were also many panoramic views of long tracts of country, hand coloured, and made up into *Orihon* or folding books, a series which commenced at least as early as 1689 (see No. 259), and was continued down to the middle of the last century or later.

Chromo-xylography was carried on by the 'single sheet' artists of the Torii school. Torii Kiyomitsu, Nishimura Shigénaga, and Ishikawa Toyonobu (see No. 8 et seq.), were the most noted contributors to this class of work, and did something to advance the art which received its first impulse from Torii Kiyonobu. The first book illustrated with coloured engravings appears to be a facsimile, dated 1749, of the *Ling-mao hwa-hwui* (see No. 424).

The *fifth period*, extending from 1765 to 1820, was the palmy age of Japanese chromo-xylography, and was moreover stamped by the development of three new features in book illustration: the remarkable series of topographical handbooks for the great cities and more important provinces of Japan; albums of miscellaneous sketches typified by the *Hokusai Mangwa*; and the illustrated novels of Bakin and his associates, which ran on to the prodigious length of sixty, eighty, or a hundred volumes of octavo size and substantial thickness.

The advance led by Torii Kiyonobu, during the first half of the century, was carried to its highest point by Torii Kiyonaga, who flourished about 1765. The number of blocks employed by the earliest chromo-xylographers seldom exceeded three, and the tints were of a very subdued character, but the colours increased in number and decorative quality with each successive generation, until at the beginning of the

new period as many as six printings were employed for each picture, the colours became remarkably tender and harmonious, and effects of gradation were superadded to the flat impressions that had previously satisfied the artists. Kiyonaga, who is best known by his drawings of women and his illustrations to novelettes, was associated with Kiyōtsuné, a less successful disciple of the school, and was followed by Kiyominé, with whom the line appears to have ended. The greatest name, however, to be placed by the side of that of Kiyonaga is that of Katsugawa Shunshō, one of the most vigorous and industrious of the leaders of the popular school. Shunshō's reputation is founded principally upon his portraits of actors taken in character, but his drawings of women were as graceful as those of Nishigawa Sukénobu, and more refined. His *Seirō bijin awasé kagami* (No. 285), published in 1776, is perhaps the most beautiful album of colour prints that Japan has ever produced.

Amongst his numerous contemporaries may be noted Shunkō, Shunjō, and Shunyei (his pupils), Ippitsusai Bunchō, Suzuki Harunobu, Isoda Shōbei or Koriūsai, Koyékawa Shunchō, Toriyama Sékiyen, and Kitawo Kōsuisai Shigémasa. Of these the first three were devoted almost wholly to theatrical portraiture; the others, with the exception of Toriyama Sékiyen, to the delineations of a pleasing but conventional type representing women of the period. The last named was a book illustrator of great ability, who has left a valuable album of miscellaneous colour prints (No. 391).

Near the end of the century appeared another group of chromoxylographic artists of scarcely less power. These were Utagawa Toyoharu and his pupils Toyohiro and Toyokuni; Hosor Chōbunsai Yeishi, originally a pupil of the Kanō academy; Kitawo Masanobu, more famous as Kiōden the novelist, Tsubo Toshimitsu, Kitawo Keisai Masayoshi, Kikugawa Yeizan, Kitagawa Utamaro, and Hokusai. The Utagawas succeeded the Katsugawas as the artists of the stage, but have also left many illustrations to novels and numberless portraits of popular female celebrities. Shunman, Masanobu, and Masayoshi were followers of Shigémasa, but the latter struck out an original line, and in addition to very spirited drawings in the style of his predecessors (No. 281), commenced the swift but expressive sketches in which one or two strokes of the brush were made to

suffice for the outline of an entire figure,—a trick which was afterwards adopted by Hokusai, and others (No. 373). Colour prints were amongst the earliest known works by Hokusai; the first of these bearing the name of Shunrō were executed in the style of the Katsugawas (No. 50), but from about 1798 his manner altered, and he commenced a valuable series of albums containing scenes in and about Yedo (Nos. 316 to 320), and earned by these a high reputation many years before the publication of his most famous work, the *Mangwa*. Hokusai, whose name is now of European renown, was born of humble parentage in 1759, and entered the school of Katsugawa Shunshō, in which, however, he does not appear to have won any distinction. Towards the end of the century he was occupied in illustrating—and occasionally in writing—cheap novelettes, and it was not until the publication of his Yedo albums that he emerged from almost complete obscurity. It was also during the opening of the present century that he began to draw designs of New Years' cards (surimonos) in association with his pupil Hokkei, and others, and to illustrate the novels of his friend Bakin, and at length, in 1812, he issued the first volume of the *Mangwa* (Nos. 325 and 327), a famous collection of miscellaneous sketches for the use of artisans and students of drawing. From this time his influence became paramount in the popular school, and in the next period, beginning about 1825, he was the dominant influence in the world of artisan art. It is noteworthy that he never contributed to theatrical illustration, despite his early training under Shunshō, but left the speciality entirely in the hands of Utagawa Toyokuni and his followers. The main facts of his career have been already brought before the European public, and need not be further dwelt upon here. Toyokuni (1772-1828) was a remarkably industrious artist, and during the twenty years of his active career did much to maintain the excellence of the chromo-xylographic single sheets which then formed an important article of commerce. He not only led the theatrical section of his art, but drew charming portraits of women, illustrated novels and other books, and even supplied drawings for an album in the style of the *Mangwa*; but this was not published until after his death (No. 345). The colours of his later single sheet pictures were daringly bright when compared with those employed by his prede-

cessors, but well combined, and for many of his admirers he stands at the head of chromoxylography. His pupils too, Kunisada, Kuniyasu, and many more, gave him good support, the former, indeed, during the life of the master was the author of some of the most beautiful specimens of the colour printing of the time; but afterwards allowed the standard of his productions to sink, and became the principal agent in furthering the decline of the art.

The great series of topographical handbooks, to which future historians of Japan will owe a heavy debt, began about 1786, with the *Miako Meisho dsu-yé*, illustrated by the pencil of Takéhara Nobushigé, or Shunchōsai, an artist of considerable power. An almost complete series of specimens will be found in Cases K, L, and M, and from these may be learned the names and styles of the various artists who have made a speciality of the work.

FIG 9. Reduced facsimile of an engraving after Hokusai in the *Suiko gwa den* (1810).

The amplification of the novel came a little later. The earlier stories were comparatively short and unambitious, but a group of novelists who arose at the commencement of the present century inaugurated a revolution in works of fiction. The new novel would often run to 60, 80, or 100 octavo volumes, each with a goodly proportion of illustrations, the designs being allowed to occupy the page without that intrusion of text which characterised the novelette or *Kusa-zoshi* (Fig. 16); and the first volume of each section of the book usually bore, in addition, a special introductory set of pictures printed from two, three, or four blocks. The artists who contributed most largely to these compositions were Utagawa Toyohiro, whose illustrations were of remarkable delicacy and beauty, Hokusai, Yanagawa Shigénobu, Giokuransai Sadahidé, and Keisai Yeisen. See Nos. 531 *et seq.* and Fig. 9.

European art exercised little influence in this period, but a painter named Shiba Gokan, who flourished in the early years of the 19th century, learned a little of the principles of linear perspective from the Dutch, and is said to have introduced engraving on copper. It has not been possible to find any of his efforts in the latter direction, but his ideas of perspective may be seen in his *Gwa-to Sai-yu dan*, a book of travels published in 1781 (No. 56). The book-illustrators and scene-painters from about the same time began to adopt perspective, but used or neglected it in a most capricious fashion, sometimes introducing vanishing points with fair accuracy in one part of the picture, while drawing the rest on the Chinese isometric plan, but never displaying any scientific acquaintance with optical principles.

This term, during which were produced most of the finest examples of pictorial engraving in black and colours, ended about 1825. It was followed by a period in which Hokusai, now associated with a new generation, stood pre-eminent.

The most interesting publications of the *sixth period*, extending from 1825 to about 1860, saw the issue of the later volumes of the *Mangwa*, the *Fugaku hiak'kei*, or Hundred views of the Peerless Mountain, and many other books by Hokusai, which proved that the eye of the old artist had become more correct, while his hand had lost none of its cunning, and

he still held his place down to the year of his death in 1849, at the great age of 89. The *Fugaku hiak'kei* (Nos. 336-337) may be indicated as one of the best examples of the engraving of the period. His associates in the latter half of his career were Utagawa Kunisada, Utagawa Kuniyoshi, Ichiriusai Hiroshigé, Haségawa Settan, Haségawa Settei, and Matsukawa Hanzan. Kunisada (who in 1844 adopted the name of his teacher Toyokuni) and Kuniyoshi supplied innumerable designs to the publishers of chromo-xylographic single sheets, but left the printers to their own devices in the matter of colours, and with the result that the art fell to a level below which only the men of the present generation were able to descend. They also illustrated several books, mostly novellettes and theatrical literature, but the *Kaibiaku yu-raiki*, an historical work, and the

Kuniyoshi satsu-gwa, are good examples of the work of Kuniyoshi outside the single sheets, which occupied his chief energies.

The establishment of an offshoot of the Utagawa theatrical school at Osaka was a feature in the period of Kunisada. This appears to have been developed through a number of pupils of Kunisada and Hokusai from about 1835 or 1840. In style of drawing the Osaka single sheets differ little from those of the Yedo artists, but there are certain peculiarities in the types given to the faces of the different actors that stamp almost all the representations, and the colours are generally stronger and marked by a greater predominance of yellow than in the works of the parent school. The style is fully exemplified in No. 190 *et seq.* The principal names were those of Hokuchō, Hokuyei, Hokushiu, Sadamasu and Shigéharu. Hiroshigé, originally a pupil of Toyohiro, at first followed the style of his teacher (see No. 129), but developed a new manner from about 1835, when he commenced a series of drawings of views of Yedo, the Tōkaidō, and other parts of Japan, of great interest and often of considerable power and beauty. His work is characterised by the attempt to realise effects of perspective, of which, however, his knowledge was very superficial, but his bold and original composition render many of his designs very precious to the collector. Unfortunately, however, the value of much of his later labour in chromo-xylography was injured by the bad quality of the colours, a fault for which the printer or publisher was probably responsible. He died of cholera in 1858 at the age of 61. His rival in the delineation of scenery was Haségawa Settan, whose labours were confined to drawings for the topographical handbooks. The *Yedo meisho dsu-yé*, the *Nenjiu gioji daisei*, and the *Tōto saijiki*, in the latter of which he was joined by his son Settei, form the monuments to his talent. The last of the handbook artists was Matsukawa Hanzan, who left some admirable illustrations to the *Kwaraku (Kioto) Meisho dsu-yé* and the *Saikoku sanjiu sanchō meisho dsu-yé* (1854), as well as a number of less important sketches. Lastly must be mentioned an entirely independent artist, originally attached to the Shijō (naturalistic) school of painting, Kikuchi Yōsai, whose drawings of the worthies of ancient Japan, in the twenty volumes of the book called the *Zen-ken ko-jitsu* (No. 361), are far superior in refinement and truth to any-

thing of the kind produced by Hokusai or Keisai Yeisen. The portraiture of Yōsai were actually types of the patrician order, those of the popular artists were modelled upon stage impersonations, adjusted to the tastes of an audience from which, unfortunately, all the representatives of culture and gentle birth were excluded by the social law of the age.

This period in the history of wood engraving fell below that which it succeeded, despite the valuable legacies bequeathed by Hokusai, Settan, Yōsai, and Hiroshigé, and with it the spirit that inspired these men seemed to pass away; for, from its closing years, the single sheet colour prints were becoming a very nightmare to the sensitive eye, and the albums of miscellaneous sketches, the pictorial handbooks of the towns and provinces, the vigorously illustrated novels, in fact everything that formed the delight of the xylographic collector, came almost suddenly to an end. It would not, however, be difficult for those who have studied the condition of the country in the disturbed period that preceded, and for a time followed, the downfall of the usurping Shōgunate to account for the evil that had befallen.

Of the latest period from 1860 to the present time, there is only a little to say. It began under very unfavourable auspices, but within the last eight or nine years an energetic revival of book illustration has taken place, and a few of the recent publications show that neither pictorial nor xylographic power is lost. The 'single sheet' industry is still in difficulties and may never resume its ancient glories, but in the volumes of bird and flower drawings of Bairei, the fairy tale pictures and collections of artisan designs by Sensai Yeitaku, the irresistibly comic albums of Kawanabé Kiōsai (see Case I), there is much to inspire delight in the present and hope for the future; and the encouragement given by Europe and America to the charming series of Children's books published by the Kobunsha company has already proved to the Japanese publishers that good work may now be made more profitable than at any period in the history of their calling. The report of the Japanese Art Commission tells us that in painting it is we who should be the pupils, Japan the teacher. We may at least hope that they will carry out this programme in the less ambitious domain of the wood engraver—unless the multiplying processes of photographic reproduction have rung the knell of xylographic art.

The main facts in connection with the technique of wood engraving are as follows. The picture, drawn for the engraver upon thin translucent paper of a particular kind (see No. 58), is pasted face downwards upon a block of wood, usually cherry—sawn in the direction of the grain, instead of across it, as in Europe—and the superfluous thickness of paper is removed by a process of scraping until the design is clearly visible; the borders of the outline are then incised—very lightly in the more delicate parts—with a kind of knife, and the interspaces between the lines of the drawing are finally excavated by means of tools of various shapes. The ink is applied with a brush, and the printing is effected by hand pressure (assisted by a kind of pad), to which procedure may be attributed much of the beauty of the result. Certain gradations of tone, and even polychromatic effects, were produced from a single block by suitable application of ink or colour upon the wood, and on looking at examples of this kind, it is often apparent that a great deal of artistic feeling had been exercised in the execution of the picture after the designer and engraver had finished their portion of the work. It may be mentioned that the use of uninked blocks for the purpose of embossing portions of the design, as an aid to the effects of colour printing, is seen in the works of Nishimura Shigénaga, executed about 1730, and was, perhaps, practised at an earlier date. It was employed with the best results by Kitagawa Utamaro in the *Momo Chidori kioka Awase* (No. 297), and is frequently seen in more recent productions of chromo-xylography.

The effect of printing from two or more blocks was in some cases obtained by preparing a single block with ink of different colours, or with different shades of the same colour. This appeared as early as 1740 in some landscapes in the *Gwako senran* where the distance is represented by pale ink, against which the dark foreground stands out in bold relief, and in the *Sōshisēki gwa-fu* (1769–70) chromatic effects are produced by the same means (see Nos. 279 and 282). Sky and water tones are in like manner graduated in colour prints, the superfluity of colour being removed, where the lighter shade is required, by the simple process of wiping the inked block with a cloth, according to directions previously given by the engraver.

In the ordinary colour prints the effects are obtained by the use of a number of additional blocks engraved in series from copies of the outline impression taken from the first or outline block. The correctness of register is secured by preserving two angles of the original block level with the surface of the lines of the engraving, and marking each of these with incisions in a certain direction (see No. 376). The angles are printed off upon the sheet bearing the first outline, and are repeated in facsimile in the cutting of all the subsequent blocks, the corner marks left upon the paper after contact with block No. 1 thus being made to serve as an exact guide for the accurate apposition of the sheet upon each successive block. The printings are all effected by hand pressure. The process is simple, but the rarity of faults of register in Japanese chromo-xylography proves that it is efficacious. Many interesting details as to the process will be found at the end of Section I. of Audsley's Ornamental Arts of Japan.

In conclusion, it should be mentioned that portions of the foregoing outline and of the notes attached to the following pages have been quoted from the 'Pictorial Arts of Japan,' and 'Catalogue of the Japanese and Chinese Pictures in the British Museum.' The illustrations were kindly furnished by Messrs. Sampson Low and Co., the publishers of the former work.

The writer has to acknowledge gratefully the assistance and advice afforded in the course of his task by Mr. E. Dillon, whose intimate acquaintance with Japan was invaluable, Mr. H. Virtue Tebbs, and Mr. J. Roget, his colleagues upon the Committee appointed by the Club to superintend the preparation of the Exhibition.

SUMMARY OF PERIODS.

FIRST PERIOD.

9th century (?) to 1608. Buddhist engravings—Portraits of divinities executed by priests.

SECOND PERIOD.

1608–1680. Early illustrated books—Engravings unskilful—Names of artists and engravers unknown.

THIRD PERIOD.

1680–1710. Artistic albums—Illustrated books—Single sheet pictures—Panoramic views—Introduction of chromo-xylography.

Principal Artists :

Hishigawa Moronobu.....*Books.*

Okumura Masanobu.....*Books and single sheets, chromo-xylographs.*

Haségawa Toün and Ishikawa Riusei.....*Books.*

Torii Kiyonobu and Torii Kiyomasu.....*Books, theatrical 'single-sheets,' chromo-xylographs.*

FOURTH PERIOD (1710-1765).

Artistically illustrated books of all kinds, especially copies of old pictures, and volumes for instruction. Chromo-xylography in books and single sheets.

Principal Artists :

Tachibana Morikuni (1670-1748), Tachibana Yasukuni, Nishikawa Sukénobu (1678-1750?), Ōoka Shunboku (d. about 1755, æt. 84), Sakurai Shiūzan, Tsukioka Tangé (1717-1786).....*Book illustrations of various kinds, 1710-1765.*

Torii Kiyomitsu, Torii Kiyonaga, Torii Kiyotsuné, Tomikawa Ginsetsu.....*Single sheet chromo-xylographs, illustrations to Novelettes, etc., 1750-1765.*

Nishimura Shigénaga, Ishikawa Toyonobu, Ishikawa Toyomasa.....*Single sheet chromo-xylographs, 1730-1765.*

FIFTH PERIOD (1769-1825).

Book illustrations, chromo-xylographic as well as in white and black. Theatrical and other single sheets. High development of chromo-xylography. Introduction of European elements—perspective, etc.—into book illustration.

Principal Artists :

Katsugawa Shunshō (d. 1792) and his pupils Shunkō, Shunyei, and others, Ippitsusai Bunchō.....*Theatrical single sheets (chromo-xylographic), books, 1770-1790.*

Koyékawa Shunchō, Suzuki Harunobu, Koriūsai (Isoda Shōbei), Torii Kiyominé, Kikugawa Yeizan, Kitawo Kōsuisai Shigémasa, Tsubo Toshimitsu or Shunman, Toriyama Sekiyen Toyofusa, Utagawa Toyonobu.....*Chromo-xylographic single sheets, chiefly portraits of women—books, 1770-1790.*

Hosoi Chōbunsai Yeishi, Kitawo Masanobu (Kiōden), Kitawo Masayoshi, Kitagawa Utamaro, Utagawa Toyoharu (d. about 1810).....*Chromo-xylographic single sheets, chiefly portraits of women—books, 1790-1810.*

Katsushika Hokusai (Shunrō, Sōri, Saito, etc.) (1760-1849).....*Chiefly books and New Year's Cards, from 1790.*

Takéhara Shunchōsai, Nishimura Chiūwa, Hokkiō Nishikuni, Niwa Tokei, Hayamidzu Shunkiōsai, Shitomi Kwangetsu.....*Books, chiefly topographical, 1780-1800.*

Shimokawabé Jiusui.....*Books, chiefly stories.*

Shiba Gokan (1747-1818).....*Books with illustrations in perspective, copper plate engravings, 1780-1800.*

Utagawa Toyohiro (d. 1828), Utagawa Toyokuni, 1772-1828.....*New Year's cards, theatrical and other chromo-xylographic single sheets, books, etc., 1800-1825.*

Utagawa Kunisada (1787-1865), Utagawa Kuniyasu, Arisaka Teisai Hokuba, Uwoya Hokkei, Katsugawa Shunsen, Katsugawa Shuntei.....*New Year's cards, chromo-xylographic single sheets, books, etc., from 1810.*

Tani Bunchō (1763-1830).....*Landscape illustrations, etc.*

Hōitsu (1761-1228).....*Albums of designs after Kōrin and in the style of the Kōrin school.*

Chō Gesshō.....*Chromo-xylographic albums, 1810-1825.*

Mori Shunkei.....*Chromo-xylographs, chiefly from Chinese sources, 1810-1825.*

Aikawatei Minwa.....*Copies of pictures, 1810-1825.*

SIXTH PERIOD (1825-1860).

Signalized by the later works of Hokusai, the topographical handbooks of Settan and the landscapes of Hiroshigé. Decline of chromo-xylography.

Principal Artists :

Katsushika Hokusai.....*Albums of miscellaneous sketches, etc.*

Keisai Yeisen, Giokuransai or Gōintei Sadahidé, Yanagawa Shigénobu, and Ōishi Matora (1787-1842).....*Chromo-xylographic single sheets (non-theatrical), books, 1825-1840.*

Haségawa Settan, Haségawa Settei.....*Topographical handbooks, 1830-1840.*

Otagiri Tadachika, Matsugawa Hanzan Yasunobu, Yashima Sadaoka.....*Topographical handbooks, 1840-1860.*

Hiroshigé (Kondo Jiubei) (1797-1858).....*Chromo-xylographic single sheets, chiefly landscape—books.*

Utagawa Kunisada.....*See back.*

Utagawa Kuniyoshi (1800-1861).....*Chromo-xylographic single sheets—books.*

Hokushiū, Hokuyei, Hokuchō, Sadamasu, Sadahiro.....*Theatrical chromo-xylographs, Osaka school.*

Kikuchi Yōsai or Takéyasu..... *Portraits of ancient celebrities.*

Hokujiu, Hokutō, Hkouba, Hokuin, Saito the Second, Yanagawa Shigé-masa, Numata Gessai (1787-1864), Katsushika Isai (Followers of Hokusai)*Books*, 1825-1860.

Shuntōsai.....*Copperplate engravings of views, etc., drawn in the European style*, 1850-1860.

SEVENTH PERIOD (1860 †).

Collapse of single sheet chromo-xylography. Decline of original book illustrations. Revival of chalcography. Introduction of lithography and chromolithography. Great development of pictorial stencil printing, chiefly in association with embroidery. Book illustrations in imitation of 'European' manner.

Principal Artists :

Kawanabé Kiōsai (born 1831).....*Albums of various kinds, chiefly comic, from 1865.*

Sensai Yeitaku.....*Albums and book illustrations.*

Bairei.....*Albums of birds and flowers.*

Ishida Aritoshi and Arai Tōjiro.....*Copperplate engravings.*

CATALOGUE.

ENGRAVINGS ON WOOD.

- 1** WOOD ENGRAVING FROM A BUDDHIST TEMPLE. Indra. Early impression. The original block of pear wood is still preserved at the Temple of Shibamata, near Tokyo. Executed by the Abbot Nichiren (1222-1282). *Lent by Mr. W. Anderson.*

- 2 & 3** WOOD ENGRAVINGS FROM A BUDDHIST TEMPLE. Dêva Kings, Agni and Mahês'vara. Early impressions. Executed by Riōkin. Signed. Dated 1325. *Lent by Mr. W. Anderson.*

The Dêva Kings of Chinese Buddhism are ten in number, and mostly of Brahmanic origin. Their names are Yama (the King of Hell), Soma (the Moon Dêva), Sûrya (the Sun Dêva), Agni (the Fire Dêva), Vasu (the Dêva of the Winds), Nair'rita (the King of the Rakchasi), Vâis'ramana (the Brahmanic Kuvera or God of Wealth), Brahmâ, Sîva or Mahês'vara, Prit'ivi (the Earth Dêva), Indra, and Varuna (the Dêva of the Water).

- 4** WOOD ENGRAVING, coloured by hand (Urushi-yé). Portrait of the Pirate Kokusenya carrying an Elephant. Artist, Torii Kiyomasu. Kioto, about 1700. *Lent by Mr. W. Anderson.*

Kokusenya, called in European records Coxynga, was a notorious Chinese Pirate of the latter part of the 17th century, who seized upon the island of Formosa, and gave much trouble both to the Japanese and to the Dutch. His courage and ferocity raised him to the position of a gallows-hero in Japan.

- 5** WOOD ENGRAVING, coloured by hand. Girl with battledore. Artist, Okumura Masanobu. Signed, Hōgetsudō Okumura Bunkaku Masanobu. Kioto, about 1700. *Lent by Mr. Ernest Satow, C.M.G.*

CHROMO-XYLOGRAPHS.

MOTIVES.

The earliest application of chromo-xylography was probably in the production of single-sheet (*ichimai-yé*) portraits of noted actors, and the history of the art is inseparably connected with that of the popular stage (which must be distinguished from the classical and aristocratic "Bugaku" and "Nō").

The position of the Japanese actor has been until recently a peculiar and somewhat anomalous one; his professional fame might assume magnificent proportions within the large plebeian circle from which his audience was almost exclusively drawn, but socially he was a pariah. The townsmen whose passions and sentiments he could sway at will, and upon whose memories he engraved the noblest traditions of the past, might esteem his death or retirement a public calamity, but would have regarded any kind of personal alliance with him as a degradation. As for the military class and nobles, every man of gentle birth who respected himself and his order either avoided the theatre or yielded to the indulgence in secret. The player was, nevertheless, a tempting subject for the new set of artisan painters, and although some of them considered the theme beneath the dignity of their occupation, there were many, and of the best, including the Toriis, the Katsugawas, and the Utagawas, who were ready to devote their talents to the perpetuation of the features and impersonations of the Garricks and Listons of their day. Some of these artists exercised a commensurate liberality of spirit in favour of the celebrities of the tea houses and courtesan quarter, but their reputation was established by their records of the stage.

Next in popularity to the actors, as subjects for single-sheet pictures, came beauties of local repute, or disrepute as the case might be; and Suzuki Harunobu, Shigémasa, Yeishi, Kitawo Masanobu, and Kitagawa Utamaro, all of whom despised the stage, together with Ippitsusai Bunchō and Katsugawa Shunshō, who were superior to prejudice, endeavoured to immortalize the forms of their fair townsmen by the chromo-xylographic art. Their works almost attained the limits of perfection in beauty of colouring, the poses were natural and easy, and the lines of drapery were full of grace; but the supple curves of figure and the sweet vivacity of expression that have warmed into a glow of eloquence more than one susceptible European tourist, met with scanty justice at the hands of the painter, and the shapely limbs were caricatured by ill-drawn lines that the keen sympathy with nature generally manifested by the Japanese artist should have made impossible.

The wrestler, too, as a favourite caterer for the amusement of the public, shared the attentions of the single-sheet draughtsmen. He considered himself

many grades above the actor by calling, and at times was pleased to assert his superiority with an arrogance that would have caused the hair to bristle upon the head of the meanest stroller in modern Britain. The artist, however, could make but little of the heavy features and elephantine form, and having no appreciation for the grand display of muscular force that would often reveal itself beneath the hide of the athlete, his studies have given us little that is worthy of preservation.

Subjects of a more classical type were occasionally selected for reproduction by colour printing in books or single sheets. The famous poets of Japan inspired the pencils of Katsugawa Shunshō and Hosoi Yeishi, but their portraitures, founded upon old pictures of the Yamato masters, were not characteristic of the Popular School. Birds and flowers were frequently represented in books, though seldom in *ichimai-yé*; and both Hokusai and Hiroshigé have bequeathed many interesting and attractive colour prints of the scenery of Japan. Scenes of history and legend rose into favour near the middle of the present century, but not until chromo-xylography was on its downward path; and still later, caricatures and illustrations of current events were circulated by the same medium. It is amongst these modern essays that the "red-haired barbarian" of the treaty ports may see himself as others see him, and when he views as his own image reflected by the Oriental mirror, the awkward, unprepossessing mortal swaggering in garments fearfully and wonderfully made, and grimacing vilely from the midst of his fiery hair and bristling beard, let us hope he will learn a lesson in humility.

Near the close of the eighteenth century, about 1780, there arose in Yedo a custom of circulating at the New Year complimentary cards, known as *Surimono*s, containing a verselet or longer composition, with an illustration printed in colours, after designs by artists of the Popular School, amongst whom were included Hokusai, Hokkei, and many of their contemporaries. Most of these works, although generally trivial in motive, were models of chromo-xylography, and as their technique appears to have been superintended with especial care, they place the resources of the engraver in the most favourable light. It was probably in these that the use of metals in colour printing first began, but as the substances employed were for the most part base alloys, instead of silver and gold, the decorative value of the addition was very questionable. The fashion began to die out before the end of the third decade of the present century, and hence the specimens are now rare. The very best examples of the work may, however, be studied in the collections of Messrs. Gonse, Burty, Montefiore, and Duret, and a few have been successfully reproduced by M. Gonse in "L'Art Japonais."

Paper fans and sunshades decorated with roughly-executed colour prints have been made in enormous numbers in the last thirty years, but are usually devoid of artistic value.

It will be noticed that the subjects illustrated upon detached sheets are not always completed upon the single page, but are sometimes continued upon two, three, or four leaves; and in the Osaka School even as many as five and six sheets were employed in the illustration of a scene of theatre. In book engravings a similar peculiarity is to be seen, the motive extending over two, three, or more pages, and occasionally, as in the *Sumida-gawa Riogan Ichiran* (No. 317), running through the entire volume in the form of a panorama.

Lent by Mr. W. Anderson.

- 25** 'LITTLE PEACHLING' [Printed from 7 blocks] (Momotarō) AND THE DEMONS. Artist, Torii Kiyonaga. Signed. Yedo, about 1770.

Lent by Mr. Ernest Satow, C.M.G.

The Story of 'Little Peachling' is told in Mitford's Tales of Old Japan.

- 26 ACTORS.** Artist, Tōshiūsai Sharaku. Signed. Yedo, about 1775.
Lent by Mr. W. Anderson.

Sharaku is considered to have missed his mark as an artist through an over-anxious searching after the truth. His portraitures, however, appear to be more eccentric and extravagant than veracious.

- 27 ACTORS.** Artist, Katsugawa Shunkō. Signed. Yedo, about 1770.
Lent by Mr. W. Anderson.

The Chromo-xylographs of the Katsugawas were usually printed from 4 or 5 blocks.

ORIGINAL DRAWING FOR THE ENGRAVER.

- 58** ROADSIDE SCENE. "The Magnifying Glass." Artist, Hokusai.
Signed, Sen Hokusai Man. Yedo, about 1830.
Lent by Mr. W. Anderson.

One of a set of a hundred pictures illustrating poetical quotations, originally drawn for the engraver. A portion were actually executed in wood and printed in colours, but for some reason the work was never completed. The remaining sketches are in the possession of Mr. Ernest Hart. Such

drawings were made upon very thin paper specially prepared for the purpose, and when handed to the engraver were pasted face downwards upon the wood block. As much of the paper as obscured the design was then scraped away, and the interspaces between the outlines were afterwards followed with the cutting tools in the manner already described. Where the artist wished to correct his work, he cut out the defective portion of the drawing and neatly inserted a new piece. This has been done in the specimen before us.

STENCIL PRINT.

- 59 HAWK AND WILD GOOSE.** Printed on silk. Artist unknown. Shijō School. Kioto, 1879. *Lent by Mrs. W. Anderson.*

Processes of *stencilling* have been applied to the decoration of wall-papers, textile fabrics, and leather for a long period. In the latter part of the seventeenth century, a workman named Yūzen adopted the use of stencil plates to obtain pictorial effects in colours for various industrial purposes, and some designs executed in this manner to imitate painted kakémonos may be seen in the British Museum Collection. It is employed with remarkable success in Kioto as an adjunct to embroidery, and the result is often very difficult to distinguish from hand painting.

CHROMO-XYLOGRAPHS (*continued*).

- 60 SCENES IN HOUSE OF ENTERTAINMENT.** Artist, Hosor Yeishi. Signed, Yeishi. Yedo, about 1800. *Lent by Mr. Ernest Satow, C.M.G.*

- 61 NEW YEAR'S PROCESSION OF GIRLS.** Artist, Hosor Yeishi. Signed, Yeishi. Yedo, about 1790. *Lent by Mr. W. Anderson.*

- 62 PEACOCK AND PEONIES.** See 57. *Lent by Mr. W. Anderson.*

- 63 DAIMIO'S MANSION.** Men personated by rats. Artist, Utagawa Toyoharu. Signed. Yedo, about 1780. *Lent by Mr. W. Anderson.*

The delineation of animals of various kinds engaged in the occupation or amusements of mankind has been a favourite subject amongst the Japanese artists from a very early period. Toba Sōjō (12th century) and some of the painters of the Tora school have left curious examples of this motive.

- 64** PORTRAITS OF WOMEN. Artist, Kitawo Masanobu. Signed.
Yedo, about 1800. *Lent by Mr. W. Anderson.*

The designer, whose real name was Kiōya Denzo, is famous as a novelist under the name of Kiōden. As an artist he was a pupil of Kitawo Shigēmasa, a portion of whose name *more Japonico* he assumed in compliment to his teacher.

- 65** SCENE OF THEATRE. Artist, Utagawa Kunimitsu. Signed, Kunimitsu,
pupil of Toyokuni. Yedo, about 1820. *Lent by Mr. W. Anderson.*

- 66** MEMORIAL PORTRAIT OF UTAGAWA TOYOKUNI (d. 1825,
æt. 56). Artist, Utagawa Kunisada. Signed. Yedo, 1825.
Lent by Mr. W. Anderson.

It appears to have been the custom to publish memorial portraits after the death of actors and others, who had done notable service in the cause of the drama. The personage was depicted in his ceremonial attire, and a few biographical facts were noted upon the margin of the sheet. Another example occurs in No. 119.

- 67** GIRL. Artist, Katsugawa Shunsen. Signed. Yedo, about 1800.
Lent by Mr. W. Anderson.

- 73** ACTOR. Artist, Utagawa Toyokuni. Signed. Yedo, about 1820.
Lent by Mr. W. Anderson.

- 74 URASHIMA AND THE SEA MAIDEN.** Artist, Kitagawa Utamaro.
 Unsigned. Yedo, about 1800. *Lent by Mr. W. Anderson.*

This story, a familiar one to every Japanese, is near a thousand years old. Urashima was a Japanese of ancient times. One day, while still a youth, he was lured across the sea by a strange maiden, who led him to a submarine kingdom and married him. After what had appeared but a few years of perfect happiness, he began to long for a sight of his family and friends, and with difficulty obtaining permission from his wife, departed, bearing as a parting gift a casket, which he was enjoined to leave unopened. He reached his native shore again in safety and sought his former home, but place and people, speech and manners, all seemed new to him, and his name was recognized only by an old man, whose memory had treasured a far-off tradition that one Urashima had disappeared three hundred years before and was never heard of again. The wanderer, maddened by astonishment and grief, tore open the casket, hoping to find a clue to the secret, but nothing met his gaze save a thin cloud which rose slowly into the air and was wafted away. As he looked upon it a sudden change came over him. His eyes became dim, his rounded limbs began to wither and tremble beneath him, his locks turned grey and fell from his hollow temples, and all the signs of an age greater than ever before seen by man came upon him within a moment; and as the last wreath of the mysterious vapour eddied away, he fell to the earth a shrivelled corpse. It was his youth that had been imprisoned within the casket, and his insane curiosity had lost him immortality.

There are several Chinese stories of the same type. Some of these are briefly related in the Catalogue to the Japanese and Chinese Prints in the British Museum (p. 107).

a. Wu Mêng. A child exposing his body to the bites of the mosquitos, to divert their attacks from his parent.

b. Luh Sü. A boy who has secreted some oranges given him to eat by his entertainers, in order to present them to his mother on his return home.

c. Mêng Tsung. A man seeking bamboo shoots in winter to make a soup for which his sick mother was craving. By a miraculous interposition of the gods the young plants were made to spring up out of their season.

The stories, twenty four in number, are told in the Catalogue of Japanese and Chinese Pictures in the British Museum.

- 148 THE GREAT STORM IN THE BAY OF OÛRA.** Artist, Kunisada.
Signed, Gotōtei Kunisada. Yedo, about 1830.

Lent by Mr. W. Anderson.

The Ghosts of the slain Heiki clan are threatening the ship that bears Benkei Yoshitsuné and the party of the rival faction (13th century).

The battle of Yashima in 1185 A.D. was the closing episode of the Japanese "War of the Roses," which had commenced nearly thirty years before. After the death of the all-powerful Taira regent Kiyomori, the fortunes of his house began to fail, and at last, in 1184, the adherents of his son were driven by the Minamoto army from their strongholds, the last of which was the castle of Yashima, and were forced to stake their final hopes upon a sea-fight at Dan-no-ura in the straits of Shimo-no-Séki. The cast of the die was against the unfortunate house of the Tairas. Owing partly to the valour and address of the Minamoto leader Yoshitsuné, and partly to treachery in the ranks of the defeated host, the entire clan, save a few who escaped to Kiūshiū, were slain or drowned in the crimsoned waters, where it is believed to this day that from time to time their ghosts may still be seen, bathed in phosphorescent light, baling the fatal sea with bottomless ladles.

The account of this bloody battle forms one of the most startling pages of Japanese history, and its various incidents have been illustrated countless times by the sculptor and the painter. The principal events in connection with it have been related by Mr. Griffis in "The Mikado's Empire."

Lent by Mr. W. Anderson.

Jurō and Gorō were two brothers whose father had been destroyed by a noble in the service of Yoritomo, named Kudo Sukétsuné. Having determined

to take vengeance, they gained access to the house of Sukétsuné in the dead of night, awoke him to reveal themselves, and then slew him. In the alarm which followed, the elder was killed, and the younger taken prisoner. The survivor's youth and boldness excited general pity, but the clamour of the son of Sukétsuné secured his condemnation. Temp. 12th century.

This picture represents a familiar incident in the "Wars of the Roses" in the 12th century, between the rival clans of Genji and Heiki (see note to No. 148). Kumagayé, an aged warrior, meeting a young foe, a mere boy, clad in all the bravery of his new military rank, fought and slew him; but after the act, moved to pity by the youth and beauty of his victim, cast aside his arms for ever and retired into the bosom of the Buddhist church.

CASE A. EARLY ILLUSTRATED BOOKS.

17 TH AND 18 TH CENTURIES.

- 251** *Isé monogatari*. 2 vols. Ancient Romance. Artist unknown. Designs in the style of the Tosa School. Kioto (?), 1608.

Lent by Mr. W. Anderson.

This, so far as is yet known, is the earliest illustrated book extant in Japan. The *Isé Monogatari* dates from the tenth century, and is attributed to the Emperor Kwazan no In (b. 968, d. 1008). It consists merely of a brief account of the amours, travels, and adventures of an unknown hero, designated as "a certain man," who is supposed to represent the famous poet Narihira, but who may be only the impersonal "Somebody" proposed by Mr. Andrew Lang as a substitute in legendary lore for solar myths and prehistoric celebrities. As a story it can boast little incident and no plot; but it is characterized by the frequent introduction of curious stanzas of an amatory type, and by the subdivision of the work into diminutive chapters each of which begins with the expression "Once upon a time." A translation has been published by Dr. Pfizmaier (*Aufzeichnungen aus dem Reiche Isé*, Wien, 1876).

- 252** *Högen monogatari*. 3 vols. Historical Romance. Illustrations in the style of the Tosa School, roughly coloured by hand. Artist unknown. Kioto (?), 1626.

Lent by Mr. W. Anderson.

The hand colouring, which resembles in its roughness and crudeness that of the English chap-books, has been executed before the sale of the volume. The practice appears to have been common before the introduction of chromo-xylography.

- 253** *Jokiō hiden*. 3 vols. Pictorial Mirror of Instruction for Women. Artist unknown. Yedo, 1649.

Lent by Mr. W. Anderson.

The morals of the rising generation in Japan have found a fair measure of literary and artistic encouragement and support. This book is probably one of the earliest of the class, and several collections of stories and maxims for the young were illustrated by Nishigawa Sukénobu, between 1720 and 1768, and from 1765 to 1791 by Shimokawabé Jiusui. Even Tsukioka Tangé, an artist better known for pictures of a more heroic strain, contributed an item in the *É-hon Himé bunko*, or Young Lady's Companion, in 1760, and many others were added at a later time, amongst which the *Doji-kiō É-hon*, or Boy's Pictorial Instructor, and the *Ni-jiu-shi Ko*, or Twenty-four Paragons of Filial Piety,

with drawings by Giokuzan ; and the *É-hon Onna Imagawa*, a collection of notable examples of women, by Hokusai (see Nos. 542 and 342), are the best known. The *Doji-kiō* has been translated by Mr. Chamberlain in the Transactions of the Asiatic Society of Japan for 1882.

- 257** *Éhon hō-kan*. 6 vols. 1st edition. Collection of legends. Artist, Haségawa Tōin. Yedo, 1688.

Lent by Mr. W. Anderson.

Subject of illustration: Kiyoyu washing his ear.

This work appears to have been the prototype of the illustrated collections of legends published at a later date by Tachibana Morikuni, Nishikawa Sukenobu, and many others, chiefly for the use of artisan designers.

Hü Yeo (Jap. Kiyoyu), the counsellor of the legendary Emperor Yao (2357 B.C.), was a Chinese Diogenes, who carried to its highest pitch the philosophy of contempt for worldly ambition and sensual gratifications. Like the Grecian cynic, he endeavoured to rid himself of all superfluities; and it is related that when a gourd, which he was accustomed to use as a drinking vessel, chanced one day, while hanging from the branch of a tree, to make sweet music with the breeze, its owner resented its appeal to his æsthetic instincts, and casting it away, would henceforth avail himself of no other cup than the hollow of his palm. Ch'ao Fu, the "Nest Father," his chosen associate, was a hermit of congenial views and practices.

The Emperor having heard of the profound wisdom of Hü Yeo, sent to beg his aid in the direction of the government of the Empire. The sage, after listening to the invitation, bathed his ear at a little cascade to wash away the taint it had contracted by the admission of sounds provocative of worldly ambition; and his friend Ch'ao Fu, who was at the moment bringing his ox to drink below the spot, led the animal away on hearing the cause of the ablution, and would not permit its thirst to be quenched at the morally-infected stream.

- 259** *Aki-no-kuni Itsukushima shokei-dzu.* Folded panoramic view of Itsukushima and its neighbourhood. Coloured by hand. Artist unknown. Kyoto, 1689.

Lent by Mr. W. Anderson.

Folded books, called *Orihon* or 'praying' books, probably antedate the ordinary sewn books (*Shomotsu*), and may have been a development of the roll, the most ancient and inconvenient vehicle for manuscript and print. This volume is probably one of the earliest of the printed and illustrated topographical records.

- 260** *Okumura ko-gwa.* (MS. title.) Illustrations of fairy tales. Artist Okumura Masanobu. Kyoto, N.D. (about 1700).

Lent by Mr. W. Anderson.

Most of the pictures in this volume will be recognized as illustrations of stories that are yet the favourites of the little ones in Japan, and are now being made known to English readers by Mitford, Griffis, Chamberlain, and Juncker.

- 261** *Yukun Sennin.* Sketches in burlesque of famous pictures. Artist, Okumura Masanobu. Kyoto, N.D. (about 1700).

- 275** *Hissei musha suzuri.* 3 vols. Illustrations of history and legend. Artist, Tsukioka Tangé. Yedo, 1759. *Lent by Mr. W. Anderson.*

Subject of illustration : Shōki and Demons.

Shōki (Chinese Chung Kwei), the demon-queller, is a mythical being, the spirit of an unfortunate scholar of the T'ang Dynasty, who in gratitude for posthumous honours conferred upon him by the Chinese Emperor Ming

Hwang (A.D. 717-762), appeared as a kind of avenging power to guard the monarch and his household from the demons of disease and other evils. He is usually drawn as a burly truculent giant clad in Chinese official garb, and armed with a two-edged sword, and is engaged in punishing or compelling menial service from a band of pigmy devils, who adopt the most comical subterfuges to escape the keen eyes of the ghostly detective.

This is probably the earliest specimen of Chinese pictorial engraving extant, and the oldest known printed book with illustrations.

The original date of the St. Christopher block is 1423, and there is now in Paris a wood-block of the Virgin and Child which bears the date of 1406. These are the earliest European engravings known to exist.

CASES K, L AND M. JAPANESE TOPOGRAPHICAL HANDBOOKS.

The topographical handbook in its more complete form is the product of the last hundred years, but pictorial representations of native scenery have been published since about 1680, either in the form of "single sheets" (*ichimai-yé*), sewn volumes (*shomotsu*), or long panoramic pictures converted into folding books (*orihon*) or rolls (*makimono*). The typical *Meisho dzu-yé* or pictorial description of noted places is, however, a work of ambitious scope and of wide utility. It indicates all the spots famous for landscape beauties, collects learned records of the historical and legendary

lore of the localities described, enumerates the various objects of curiosity or archaeological importance preserved in the neighbourhood, contributes scientific notes upon the flora and fauna of the district, and opens a fund of practical information as to industries, commerce, and a hundred other matters of interest both to resident and visitor. Each of the great cities and of the chief provinces had its handbook carefully edited and illustrated by the leading popular artists of the day. To Yedo (now Tokyo) and its environs were dedicated twenty substantial volumes; Kioto had eleven volumes, exclusive of a large work devoted to its gardens; that of the Tōkaidō, the high road between Yedo and Kioto, six volumes; that of the temple of Itsukushima and its vicinity filled ten volumes; and the list might be extended up to two hundred volumes or more. The first of the series was the *Miako (Kioto) Meisho dzu-yé* (1787), illustrated by Takéhara Shunchōsai, who also supplied drawings for the handbooks for Yamato (1791), Idzumi (1793), and Settsu (1798). Niwa Tokei, Nishimura Chiūwa, Hōkkio Nishikuni, and some others contributed to the work in the first two decades of the

present century, but the void left by the death of Shunchōsai was not filled until 1837, when the publication of the *Yēdo Meisho dzu-yé* introduced striking representations of the scenery of the capital of the Shōgun, from the pencil of Haségawa Settan. A description of the holiday resorts of the city, forming suite with the last, was issued in 1838, and a smaller book of a similar kind in 1839. Many other popular artists soon appeared in the field, and some guide books, like the *Nikkō-san Shi*, included designs by several contributors. The latest of the more important "Meishos" were the *Tonégawa dzu shi* (1856), illustrated by various artists, and the *Kwaraku Meisho dzu-yé* (1859), with pictures by Hanzan Yasunobu.

As previously noted, the handbooks embellished by Shunchōsai were not the first publications descriptive of well-known places. Views of Yedo appeared before the end of the seventeenth century. The *Kwaraku Saiken dzu*, published in 1703 (see No. 454) contained good drawings of buildings and landscapes, and anticipated the *kusa-zoshi* in placing the text upon the same page with the illustration (but in this case writing and sketch were separated by cloud-like outlines); the *Tōgoku meishō Shi*, a description of noted places in Eastern Japan, illustrated by Tsukiōka Tangé, was printed in 1762, and a number of *orihon* volumes with hand-coloured drawings in panoramic form were issued between 1710 and 1770. None of these essays, however, merit comparison with the handbooks of Shunchōsai and his followers. The *Meizan dzu-yé* of Tani Bunchō is an excellent supplement to the group of the "Meisho dzu-yé," and contains many admirable sketches of the mountain scenery of Japan.

The illustrations of these works as a class are very spirited, and notwithstanding the absence of light and shade and the defects of perspective, conveyed a vivid and faithful impression of the scenes depicted. Equal justice was rendered to the people whose figures appeared in the landscape, street, or building, and the more idealized pictorial transcripts of history and folk-lore were well composed and told their story with good effect. The introduction of arbitrary cloud forms used for decorative purposes by the masters of the ancient Japanese school was adopted for convenience in the "Meisho" drawings, partly to exclude unnecessary details, and partly to secure a space for descriptive text. The picture, when large enough to cover two pages, was divided into two halves, and where the range of view was unusually wide, the design often extended in segments over three, four, or more pages, a separate block being necessarily used for each page.

CASE P. ENGRAVINGS ON COPPER AND STONE.

Etching upon Copper has been little employed by the Japanese, although the process is well adapted for the reproduction of some of the most characteristic of their pictorial designs. It was introduced in the 16th century by the Jesuits, and there is in the British Museum a Japanese volume, printed in 1598, in Roman type, with a frontispiece engraved on copper, in the European fashion, probably by an unskilled European hand, but possibly by a Japanese copyist. The art was forgotten till it was again brought forward near the end of the last century, by Shiba Gōkan, who had studied the process in Nagasaki, under the instruction of a native of Holland. Drawings of European etching tools were given in a book called *Kōmō Zatsuwa*, published in 1785 (British Museum), and from this time examples of the art were issued at intervals, most of them bearing traces of "Western" perspective, and even showing some rudiments of light and shade, a part of the lesson taught by the Dutch master of Gōkan. The principal albums of copper plates are the *Dōban Saigwa chō*, by Okada Shuntōsai and *Tōkaidō go-jiu-san Œki*, a series of views on the road between Yedo and Kioto, both published about 1855, and a few volumes of miscellaneous sketches, executed within the last few years. No. 498 may be regarded as a fair specimen of the work. The process employed in this case, as probably in all others, involved the use of acid as a mordant, the dry point being employed only to correct defects in the biting in. Incised designs upon ornamental objects of bronze and other metals are of much older date, and the impressions taken from some works of this kind have all the effect of the most vigorous work of the book etcher. Some very beautiful printings from *Kagami-buta* (button-like plaques forming part of a certain kind of netsuké), obtained by M. Burty, in illustration of his collection, will be found in No. 565.

Lithography has been practised to a small extent during the last fifteen or twenty years. A portrait of the botanist Iinouma Yokoussai, executed as a frontispiece to the *Shinchō Sōmoku zsusetsu* in 1874, a plate in the *Meiji Tai-heiki*, of about the same date, and the illustrations to the *Kwanko zsusetsu*, of Mr. Ninagawa (1875), all of indifferent merit, may be regarded as average examples of the work. In the last few years, however, two very successful essays in chromolithography have been produced, the *Kōk'wa Yokō*, an illustrated description of native antiquities published in 1880, and the *Nami no Nishiki*, an album of Japanese fishes (1883), which in many respects can scarcely be excelled.

CASES R AND S. ILLUSTRATED NOVELETTES.

The oldest illustrated books were poetical and semi-historical romances of the type of the *Ist Monogatari* and *Heiji Monogatari*, Nos. 251 and 252, which appeared in the early part of the 17th century. These were soon reinforced by contemporary fiction, in the illustration of which almost every popular artist of note appears to have taken part, from Moronobu to Kuniyoshi. The first examples of this group were of two sizes, a large octavo, usually devoted to the reprints of the older stories, and a duodecimo, generally less ambitious in style and contemporary as to text. The engravings in both were either confined each to a single page, or covered two opposite pages; in the latter case two blocks, one for each half of the drawing, being required. In some instances

the cuts were coloured by hand, as in the *Heiji Monogatari* (1626), and a few of the works illustrated by Hishigawa Moronobu; and from the first, as in No. 251, the design was characterized by the introduction of fictitious clouds, in imitation of the printings of the old Japanese (Yamato) School. About 1730 was added an oblong duodecimo, No. 534, a form still preserved in some of the modern books for artisan designers; but the most curious style of book-printing was that of the "*kusa-zoshi*," which dates from about the same period, and was contributed to by most of the well-known popular artists of the 18th and 19th centuries, including Torii Kiyonobu, Kiyomitsu, Kiyonaga, Kiyotsuné, Tomikawa Ginsetsu, Hokusai, Yeishi, Utamaro, Toyokuni, and Toyohiro. The *kusa-zoshi* was a book of very small dimensions, usually divided into a number of thin fasciculi, the covers of which in the later specimens were resplendent with chromo-xylographic illuminations (see No. 155), and each page or pair of opposite pages bore a design that occupied nearly the whole of the space, the text being relegated to any part of the margins into which it could be intruded without obscuring the picture (see Fig. 16).

From about the beginning of the 19th century many of the novels reverted to the octavo form, and the first volume or fasciculus of each work or section of a work was usually prefaced by a few introductory plates, printed from two or three blocks. These stories were often of tremendous length, sometimes extending over sixty, a hundred, or more volumes, and in one class the sentiment was apt to run in a somewhat violent strain, bringing before us such an assemblage of ghastly murders, bloody combats, and ghostly apparitions, intermingled with such feats of superhuman strength and ideal heroism, that it is difficult to imagine the books were created by and for the most kindly, gentle, and pacific people in the world, the Japanese trading and artisan community. It would be a task of extreme interest to trace the evolution of Japanese fiction from the early days of the Kioto Court, which gave birth to the refined patrician compositions of the type of the *Genji Monogatari*, down to the modern era of Kiōden, Bakin, and Tanéhiko.

- 545** *Toba-yé Ogi no mato*. 3 vols. A collection of the Toba-yé or Sketches in the style of Toba Sōjō, a Buddhist abbot of the 12th century. 1720.

Lent by Mr. W. Anderson.

"The Toba pictures" are humorous caricatures which date from the 12th century, and derive their name from the inventor Kaku-yū or Toba Sōjō.

Kakuyū, a distinguished scion of the Minamoto family, was an abbot of the Temple of Miidera, in the province of Ōmi, in the reign of the Emperor Rokujō (1166-1168 A.D.). His more familiar appellation, Toba Sōjō (the Toba priest), refers to the monastery Toba no In, where he had at one time resided. He was an accomplished artist in the Chinese style, and appears to have been the first Japanese painter who made a speciality of comic drawing and employed it as a means of attacking official dishonesty. His original works are extremely rare, but the copies which have reached us show that his burlesque manner has been carefully preserved.

The style did not give rise to a "School," but was taken up by men of any or no academy who desired to give expression to their feelings in broad caricature. Its peculiarities of design as applied to figures consisted merely in exaggerating the size of the head, giving it a frog-like character by widening the mouth and reducing the nose to a couple of nostril dots, and elongating and attenuating the limbs at discretion. There was, however, no attempt at portraiture, and as the draughtmanship was freed from all academical difficulties, the field was open to artistic and inartistic competitors alike. In some cases, indeed, they gained in comicality by the startling violations of art canons in which their creators indulged, but in others the simplification of the process of production led to floods of mere burlesque scrawls, which could only attract attention by their extravagance of badness.

- 546** *Hiaku-nin shiu*. Portraits of famous poets, printed on both sides of a thick enamelled paper. About 1670.

Lent by Mr. W. Anderson.

This is the only example yet known in which the printing has been executed on both sides of the sheet. The enamelling of the paper is also remarkable.

- 547-8** *Gégio tori yéshi*. A description of whales and whaling. Illustrated. Printed from 2 blocks. About 1860.

Lent by Mr. W. C. Alexander.

A remarkable book, containing the first account of the species of whale depicted. The anatomy of the animal is fairly represented.

- 549-50** *Bairei hiaku-chō*. 2 vols. Large Edition. Drawings of birds and flowers, printed in colours. A reproduction on an enlarged scale of No. 412-3. Artist, Bairei. Tokyo, 1886.

- 613** THE EMPRESS JINGŌ, with Také-no-uchi no Sukuné and her infant.
Artist, Kunikané. Signed, Ippōsai Kunikané. Yedo, about 1830.

Lent by Mr. W. Anderson.

Jingō, who, according to Japanese tradition, was the consort of the Emperor Chiūai, went in obedience to a divine command to subjugate Korea. This she is said to have effected, and returning at the end of three years gave birth to a child, the Emperor Ōjin, whose birth had been miraculously delayed during the whole of her absence. She reigned from 201 to 269 A.D., and was succeeded by her son, to whose passive influence the whole credit of the Korean Conquest is commonly assigned. Také-no-uchi no Sukuné, her general and counsellor, attained the ripe age of 250 years in the service of six successive emperors.

- 614** JIURŌJIN AND BISHAMON, with emblems of wealth and learning. Artists, Kunimaru and Yoshimaru. Signed, Ichiyensai Kunimaru and Kitawo Kwaransai Yoshimaru. Osaka, about 1835.

Lent by Mr. W. Anderson.

- 622 WRESTLERS AT RIOGOKU, Yedo.** Artist, Kunisato. Signed, Ritsusensai Kunisato. Yedo, about 1835.

Lent by Mr. W. Anderson.

- 623 KITE FLYING.** Artist, Kunitéru. Signed, Ichiyōsai Kunitéru, late Sada-shigé. Yedo, about 1850.

Lent by Mr. W. Anderson.

- 624 ACTOR.** Artist, Kunitomi. Signed, Hanagawatei Kunitomi. Yedo, about 1835.

Lent by Mr. W. Anderson.

- 625 ACTOR.** Artist, Kunitsuna. Signed, Ichirantei Kunitsuna. Yedo, about 1845.

Lent by Mr. W. Anderson.

- 626 INSTITUTION FOR THE CURE OF THE SICK.** Artist, Kuniyoshi. Signed, Ichiyōsai Kuniyoshi. Yedo, about 1840.

Lent by Mr. W. Anderson.

To the left is a gaily-attired woman suffering from Melancholy, of which complaint the cure is not indicated; below a dentist extracts a decayed tooth with a formidable pair of pincers; in the middle an hysterical girl is about to be treated by the pressure of a great stone; another leech examines a young girl with a short leg; a woman pitted by the small-pox holds her face, protected by a mask, over the vapour arising from a boiling vessel; a noseless man has assumed a very undecorative substitute; and a sufferer from weak eyes applies a pair of glasses. Towards the left are a dwarf, a dyspeptic, a prodigiously stout man, a miserable-looking creature with a goltre, a famished person with an unappeasable appetite, and a lady whose abnormal largeness of hips is to be reduced by mechanical constriction. Finally, the list of diseases includes ill-temper, and want of money, but unfortunately no suggestion is offered for the remedy of either of these serious ailments.

- 627 and 627A** "MAN IS MADE BY ACCUMULATED EXPERIENCES." Portraits composed by a cluster of wrestlers. Artist, Kuniyoshi. Signed, Ichiyūsai Kuniyoshi. Yedo, about 1850.

Lent by Mr. W. Anderson.

- 628** NITTA NO SHIRŌ AND THE VISION OF KWANYIN. Artist, Kuniyoshi. Signed, Ichiyūsai Kuniyoshi. Yedo, about 1855.

Lent by Mr. W. Anderson.

Nitta no Shirō was a famous retainer of Yoritomo in the 12th century. He with some comrades penetrated into a mysterious cave, and saw a vision of the Goddess Kwanyin. Nitta, unmoved by the sight, held converse with her, while his fellows were struck down with terror.

- 629** A CHARITY SERMON by Ikkiū. Artist, Kuniyoshi. Signed, Chōwōrō Kuniyoshi. Yedo, about 1850.

Lent by Mr. W. Anderson.

Ikkiū was a talented but eccentric priest, calligraphist, and painter of the 15th century. The discourse here represented is evidently one of a moving character.

- 630** ACTOR. Artist, Nansōrō (?). Seal. Osaka, about 1835.

Lent by Mr. W. Anderson.

- 631** ACTORS. Artist, Nishigawa Nobuharu. Signed. Yedo, about 1840.

Lent by Mr. W. Anderson.

- 632** ACTOR. Artist, Haségawa Nobuhiro. Yedo, about 1840.

Lent by Mr. W. Anderson.

- 633** FUKUSUKÉ (as Artist) drawing *Otsu-yé*. Artist, Okusawa Ritsusai. Signed. Yedo, about 1845.

Lent by Mr. W. Anderson.

Fukusuké, a good-humoured but fatuous-looking boy with a large head, is in some sort an Emblem of Good-fortune. "Otsu-yé" are caricatures sold at Otsu (near Kyoto), a former capital of Japan.

- 634** THE FIRST REARING OF SILK WORMS IN JAPAN by the Consort of the Emperor Yūriaku. 5th century A.D. Artist, Giokuransai. Signed. Yedo, about 1855.

INDEX OF NAMES OF ARTISTS AND ENGRAVERS.*

THE names by which the later popular artists are known are nearly all patronymics or *noms de pinceau* adopted in compliment to their teacher. Thus Kondo Jiubei, on entering the school of Utagawa Ichiriusai Toyohiro, thenceforth signed himself Utagawa Hiroshigé, Ichiriusai Hiroshigé, or Hiroshigé (the final name is always that by which the person is familiarly designated). As a rule the artist adopts the second character of his teacher's name, and adds to this another which he in turn transmits to his followers, but sometimes the first is chosen. Thus, the pupils of Toyokuni are Kunisada, Kuniyoshi, etc.; those of Kunisada are Sadatora, Sadamasu, etc.; those of Hokusai are Hokuba, Isai, etc. More rarely the whole name is taken, either during the life and with the consent of the original owner—thus Hokusai gave his name of Saito to Endo Hanyémon, who became Saito the Second—or after his death as in the case of Kunisada, who in 1844 adopted the signature of Toyokuni (died 1828), in place of his own. Other names, again, are founded upon a local or personal allusion, as Hokusō (Itchō), 'the Northern Window'; Man Rōjin, 'the Ancient of a Hundred Centuries,' etc. Of such designations the person may assume a great number in the course of his lifetime, throwing one aside in favour of another as often as caprice dictates a change, and much to the discomfiture of future collectors of his works.

In the following index the names are enumerated singly.

* The kind assistance of Mr. M. Kataoka in the preparation of this index has been of great value.
